

## SHELTER PROTECTION PROGRAM

Whether it's an overnight shelter or a short-term temporary housing situation, the combination of full capacity with turn-over presents the perfect environment for unwanted guests ... lice, fleas, ticks, bed bugs and viruses.

QuestSpecialty has a trio of Shelter Protection Products to easily address these pests while protecting individuals seeking safe harbor.

### LICE, DUST MITES

Crowded shelters provide the ideal conditions for the spread of lice.

**4570 CLOBBER Lice, Dust Mite & Bed Bug Multi-Purpose Insect Spray** quickly eliminates these pests on surfaces.

Additionally, it kills and controls lice eggs on mattresses, furniture, and other non-washable items without staining water-safe fabrics or leaving an odor. Also effective on fleas and ticks.

EPA registered with Permethrin as active ingredient.

### BED BUGS, FLEAS, TICKS

**BED BUGS** are notorious hitch-hikers as they attach themselves to bags and clothing.

High heat treatments are expensive and difficult, if not impossible, to implement in shelters.

**4650 LIGHTS OUT Bed Bug Killer** kills bed bugs in minutes, then continues to kill for up to 30 days after application. Also effective on fleas and ticks.

It is made only with ingredients that are low toxicity which qualify it to be an EPA 25(b) exempt pesticide.

### VIRUSES

Viruses can spread quickly within a shelter as many people are confined within an enclosed area.

**3570 ENCORE PLUS One-Step Disinfectant** is effective on viruses including Influenza, Respiratory Syncytial Virus (RSV), Norovirus and SARS-related Coronavirus 2 (COVID-19) to name just a few.

It is also effective on a broad spectrum of bacteria, is a fungicidal and inhibits the growth of mold and mildew. Because it is ready-to-use, it is very easy to apply in a shelter environment and leaves a fresh floral scent.
