

LICE KILLERS

SOLUTIONS FOR GETTING RID OF LICE!

The head louse is a parasitic insect that can be found on the head, eyebrows and eyelashes of people. Head lice spread by direct contact with the hair of the infested person. Head-to-head contact is common during play at school, at home and elsewhere such as at sports activities, playgrounds and slumber parties. Sharing clothing, or articles such as hair ribbons, combs, hair brushes, stuffed animals and lying on a bed, couch, pillow or carpet that has recently been in contact with an infested person are other ways to spread lice.

Eggs, nymphs and adults will invariably fall off an infested person and land on carpets, sofas, bed linens and other areas of homes and institutions. People then come in contact with these eggs, nymphs and adults and become infested themselves. It is critical that both the individual and the habitat are treated for complete eradication.

Recent studies show that head lice immunity to permethrin-based products has spread to over 40 states and Canada. PROWLER is a 21st century, state-of-the-art, bio-engineered product that is 100% effective, yet safe for humans, pets and the environment. It will dissolve the waxy membrane found on the exoskeleton depriving them of life sustaining liquid and they die from dehydration. Building an immunity is impossible.

CLOBBER is an EPA registered, water-based insect spray and contains the synthetic pyrethroid permethrin for quick knockdown and up to four weeks residual control. Permethrin works by paralyzing and killing lice and their eggs/nits. Effective against other listed insects as well.

457000001-20AR CLOBBER Lice, Dust Mite & Bedbug Multi-Purpose Insect Spray

- Kills Lice and Their Eggs on Mattresses, Furniture, Car Interior and Other Non-Washable Items
- Kills Bedbugs & Fruit Flies
